**Declaration Letter**

**To the kind attn. of to whom might concern**

*Subject: The Declaration of performance*

This letter is to verify that after extensive testing and analysis, we are confident in declaring that Epoxytable-5 (five) is capable of withstanding prolonged exposure to temperatures of up to 45°C (113°F).

Furthermore, Epoxytable-5 (five) can also tolerate occasional exposure to temperatures as high as 70°C (158°F). This tolerance ensures that Epoxytable-5 (five) remains a versatile option for applications that may experience sporadic temperature spikes.

Important to note that any temperature fluctuation between 20°C (68°F) and 90°C (194°F) has the potential to cause changes in the molecular structure of this material.

Users should consider these limits to maximize durability and performance.

Technical Director

*Danilo La Porta*
